

# Greetings from Mwalimplus!

## We are teachers at heart!!

We are teachers at heart! As teachers, we are passionate about learning and MwalimuPlus is the essence of our passion because it combines the learning inherent in multiple disciplines such as Mathematics, Computing, Physical and Social Sciences, Education and Music.

December 2017  
Vol. 1 Issue 1

Learning for curiosity brings a special joy when we stumble on something novel that quenches a thirst for knowing. On the other hand, learning for utility maximization of knowledge also brings satisfaction and joy. Especially when we apply concepts to build something! Either way the MwalimuPlus team wishes to share the magic and joy of learning with young learners who need our encouragement to unlock the Mathematical genius that is in every student.

Mathematical abilities can be developed through a series of small successes.

In their book **Creative Confidence**, David and Tom Kelly give an example of expert application of “Guided Mastery” by the eminent Prof. Albert Bandura (who is frequently referred to as ‘the greatest living psychologist’.) In fact, Dr. Bandura’s work scientifically validates something we at MwalimuPlus already know - that Mathematical abilities can be developed through a series of small successes. MwalimuPlus guides users to master mathematical concepts in small steps and this is exactly why MwalimuPlus is well suited for the new Competency Based Learning (Mathematics) curriculum.

MwalimuPlus assesses the knowledge level of a user and adapts to each individual by customizing materials and tasks to each user. MwalimuPlus assists teachers to save time and tracks user progress.

Some prominent mathematicians have argued that Mathematics enables effective thinking. We could therefore dub MwalimuPlus as an ‘opportunity centre for effective thinking skills’ and of course MwalimuPlus will be available anytime, anywhere.
